

PrivateGSM

Your privacy within a click away.

When you are talking on the phone about **discreet matters**, you tend to move away from people's attention. This may not be even enough. According to various studies on communication privacy, many businesses and organizations run a high risk of **illegal interception of cell phone calls**. These can be spies, malicious hackers, etc who aim to use others' information for their benefit.

What if someone was listening to you, right now?!

How much will it cost you if your information ends up in the wrong hands?

For an enterprise:	For a professional:
- theft of industrial secrets;	- loss of personal or clients' information;
- illegal access to corporate information;	- improper use of clients' information;
- loss of purchasing orders, and contracts;	- untrustworthy communication with clients;
- withdrawal of clients in an illicit way.	- loss of professional credibility.

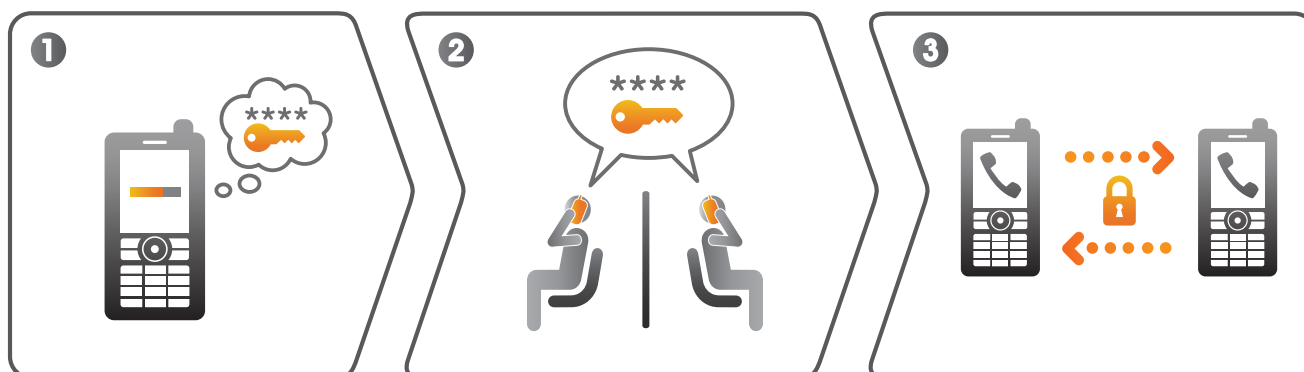

Get rid of the man-in-the-middle!

PrivateWave engages in providing best telecommunication security. Now, for your need of privacy, PrivateWave offers **PrivateGSM**, an **innovative software** to encrypt your calls in a totally safe and legal way.

Once installed on mobile phones, PrivateGSM can **encrypt all calls between the users**. The phone call will be transferred through an encrypted data flow incomprehensible to anyone willing to break in. **All this with one click**. PrivateGSM has been developed to offer you to communicate easily and securely with your contacts. **Just like a standard phone call**.

What if your contacts do not have PrivateGSM? No problem. With the **"Invite"** option of the PrivateGSM menu, you can send your contacts a download link so that they can install and use a **free version** of PrivateGSM in **receive-only mode**.

From now on, with your phone, you will be able to manage your daily assignments comfortably. You do not have to attend your private meetings, you do not have to leave anywhere. One software saves it all. It is a spare of time, and money. Thanks to PrivateGSM, **you get rid of the man-in-the-middle**.

1 Your mobile generates the security code

2 Verify the code with the person you are talking with

3 Talk securely in an encrypted mode

PrivateGSM is...

...**easy to install**. Using the weblink you received through sms, you can download and in easy steps install PrivateGSM in your mobile phone;

...**easy to use**. With one click you can start protected conversation with anyone from your personal book;

...**software-only solution**. You do not need any external hardware to connect to your mobile phone. PrivateGSM does it all!

...easy to extend your security network to your contacts.

By using the "Invite" option you can send an invitation-sms to all your contacts. In this way, they can download and install the free version of PrivateGSM;

...**impenetrable**. Thanks to AES-256, a symmetric encryption standard that operates in the military level, your phone calls will be entirely secure!

A very sophisticated technology with a very simple usage!

PrivateGSM menu

PrivateGSM has been developed by PrivateWave in cooperation with **Philip R. Zimmermann**, a global expert in telecommunication security.

Philip R. Zimmermann is the creator of PGP (**Pretty Good Privacy**), the most used famous software for email cryptography. He later developed **ZRTP**, a **new technology for phone call cryptography**, which is based on the same principles of PGP. PrivateGSM is based on ZRTP/S, which is a particular form of ZRTP. **PrivateGSM is capable to guarantee protected communication for the GSM and UMTS networks.**

Today, Philip R. Zimmermann is carrying out his mission to **defend human rights**, because privacy and protection of one's own communication are, before all, a matter of democracy.

Privacy is a matter of democracy.
